BENDING THE GPX SERIES LED LUMINAIRE FOR VACUUM ARCH LIGHTING

G&G's GPX Series is an ideal product for outdoor canopy and vacuum area lighting.

The design of this product allows the luminaire to be easily formed to match the curve of any arch style vacuum systems for a sleek and modern appearance.

The GPX product will accept a bend in one direction, with the lens and LEDs facing downward.

The patented single piece enclosure combines copolyester and aluminum together which allows the luminaire to be permanently formed without adding any heat or stress to the housing.

Best practices to form the luminaire are to simply cold roll the fixture with your hands over your knee or other surface.

This should be done slowly and with no added heat. Start in the center of the luminaire and work your way out towards each end adding additional bend as needed. Once bent the luminaire will permanently hold in place as formed.

Contact G&G for support.

We will be glad to answer any questions or to demonstrate how to bend the GPX luminaire to fit your vacuum arch. Contact us at support@ggled.net or (800) 285-6780.
